# Lee, Ying-Hsien

Email: hsien.yy@gmail.com | Portfolio: ollie33.github.io

## Education

**Feng Chia University — B.S. in Computer Science & Information Engineering** **Sep 2022 – Jun 2026**

Relevant Coursework: Systems Analysis & Design, Database Systems, Innovation and Entrepreneurship

## Professional Experiences

**e-Insure (PChome Group) — Digital Product Manager Intern** **Sep 2026 – Present**

- Planning a phased redesign of the company website, prioritizing existing bugs and process issues before improving visibility in search and AI-generated answers (SEO, GEO, AEO).
- Working toward the launch of an AI customer-service bot by testing its answers and turning root-cause findings into RAG optimization requests for engineers.

**AI startup — Product Manager Intern, AI-adoption project** **Jul 2026 – Aug 2026**

- Interviewed staff across roles to define the scope of an AI-adoption initiative.
- Helped map the existing quote-to-drawing workflow with frontline staff and design the prototype workflow, with engineers integrating the AI model.

**SYSTEX Corporation — Systems Analysis & Project Management Intern** **Sep 2025 – Jun 2026**

- Co-wrote functional specifications with my mentor for a corporate website and an e-commerce back-office system, covering page flows, field logic, and exception scenarios.
- Interviewed clients and translated requirements into flowcharts and functional design documents.
- Executed SIT/UAT test cases, analyzed bugs, and tracked deviations through resolution.

**Independent handmade dessert brand — Founder** **Aug 2023 – Dec 2024**

- Ran product development, cost management, and customer relationships independently for 17 months.
- Later automated order processing with n8n and AI email parsing, cutting time by about 87% in testing (2 hours to 15 minutes).
- Improved recipes through iterative testing and customer feedback.

## Academic Projects

**RAG-Based Virtual Anchor System — Capstone Project Leader** **Feb 2025 – Dec 2025**

Published at TCSE 2025 | Top 7 of 80 (Departmental Excellence Award)

- Led a four-person team in building an automated pipeline from news scraping to virtual-anchor video generation.
- Used FAISS and embedding-model selection to ground scripts, comparing outputs with and without retrieval.
- Reduced a production process that typically took hours to automated output within 10 minutes.

## Extracurricular

**Kairoo (Destination-driven companion platform) — Product & UX** **Jul 2025 – Aug 2025**

European Innovation Academy (Portugal)

- Built an interactive MVP in 15 days with a five-person team from five countries and pitched it at Demo Day.
- Designed user flows and wireframes for activity-based matching, itinerary sync, and verified student login.

## Skills

**Product & Requirements:** Stakeholder interviews, requirements analysis, SRS/FSD documentation, wireframing, SIT/UAT testing

**AI & Automation:** RAG (FAISS, embedding selection), n8n, LLM APIs, AI coding tools (Cursor, Claude Code, Antigravity)

**Programming:** C (Intermediate), SQL (Intermediate), Python (Intermediate), Java (Basic)

**Languages:** Mandarin (native), English (IELTS 7.0)
