

Lee, Ying-Hsien 李映嫻

Product, with an engineering background

hsien.yy@gmail.com

linkedin.com/in/olivia-lee

Computer Science graduate (Feng Chia University) working at the point where product meets engineering. I turn vague requirements into specs engineers can actually build — practiced across enterprise system analysis, a cross-national MVP sprint, a published RAG system, and seventeen months running my own brand.

WORK EXPERIENCE

Product Manager Intern · AI-adoption project, mid-sized manufacturer Jul 2026 – Aug 2026

- Ran the discovery phase of an AI-adoption initiative: interviewed working staff **role by role** and converged scattered asks into a concrete scope.
- Mapped the **as-is quote-to-drawing workflow** and confirmed it line by line with the people doing the work — before any AI design was discussed.
- Built a **working prototype** of the proposed flow with AI assistance and iterated it with frontline users — the generation engine was mocked on purpose, so feedback landed on **process gaps** rather than output precision, with one swap point left for the real model.

Systems Analysis & Development Intern · SYSTEX Corporation Sep 2025 – Jun 2026

- Authored **SRS / FSD specifications** for e-commerce back-office systems — page flows, field logic, and exception scenarios — serving as the collaboration baseline across APM, design, and engineering.
- Conducted **client interviews** and translated needs into flowcharts and functional design documents, enabling rapid convergence at the ambiguous stage of requirements.
- Executed **SIT / UAT scripts** against specifications: logic validation, bug analysis, and tracked resolution of deviations from expected behavior.

Founder · Independent handmade dessert brand Aug 2023 – Dec 2024

- Built and ran the brand solo for seventeen months — product development, cost management, and customer relationships.
- After closing, rebuilt the manual order workflow with **n8n + AI email parsing** (Gmail → Sheets) as an automation exercise — validating roughly **60% less admin time**, slack that was never available while operating.
- Refined recipes through iterative testing, carrying the **data-feedback → rapid-iteration** habit into later technical work.

PROJECTS & COMPETITIONS

RAG-Based Virtual Anchor System · Capstone, Project Leader · published at TCSE 2025 Feb 2025 – Dec 2025

- Led a four-person team to design an end-to-end automated virtual-anchor pipeline — news scraping to video generation with **zero manual steps; Top 7 / 80**, Departmental Excellence Award.
- Grounded LLM output with a **RAG pipeline** (FAISS, embedding-model selection); verified the effect by **comparing generated scripts with and without retrieval grounding**, measurably reducing hallucinated content.
- Compressed a traditionally hours-long production process to automated output **within 10 minutes**.

Kairoo — destination-driven companion platform · EIA (Portugal), Product & UX Jul 2025 – Aug 2025

- Defined and shipped an interactive **MVP in 15 days** with a five-person, four-country team, working entirely in English; pitched at Demo Day to investors and mentors.
- Designed core **user flows and wireframes** — activity-based matching, itinerary sync, and verified student login.

SKILLS

Product & Requirements	Requirement interviews, scope convergence, SRS / FSD specification, flow & field-logic design, wireframing, SIT / UAT scripting
AI & Automation	RAG system design (FAISS, embedding selection), Prompt Engineering, n8n, Cursor
Programming	C, SQL, Python, Java
Languages	Mandarin (native), English (IELTS 6.5)

EDUCATION

Feng Chia University — B.S. in Computer Science & Information Engineering Sep 2022 – Jun 2026

GPA 3.8 / 4.3 · FCU Honor Student · Relevant: Systems Analysis & Design, Database Systems, Linux Administration (TQC certified)
